

# CertiK Official Press Kit:

Questions? Contact us directly at [info@certik.org](mailto:info@certik.org)

---

Below is the official CertiK information to include in press releases and social media. For interview and other inquiries, please reach out to [info@certik.org](mailto:info@certik.org).

## **About CertiK:**

CertiK is a pioneering blockchain cybersecurity start-up founded by Computer Science professors from Yale University and Columbia University. By applying the rigor of proprietary Formal Verification technology on smart contracts and blockchain protocols, CertiK has been able to secure over \$4.39B in assets, including many of the world's top blockchain projects. The research efforts of CertiK have received grants from IBM and the Ethereum Foundation, and notable investors, which include Binance Labs, Arrington XRP, Lightspeed China Partners, Matrix Partners China, and NEO Global Capital, among others.

Different from the traditional testing approaches, CertiK attempts to mathematically prove blockchain ecosystem and smart contracts are hacker-resistant and bug-free. Trusted by the security industry, CertiK has established strategic partnerships with the world's top digital asset exchanges, such as Binance, OKEx, Kucoin, and Huobi, as well as blockchain protocols, such as NEO, ICON, and QuarkChain.

## **CertiK Core Technologies:**

- Formal Verification - mathematical proofs to verify all possibilities of mission-critical programs
- AutoScan - scalable technology to identify and remediate security vulnerabilities
- DeepSEA-Blockchain - functional programming language for formally verifiable smart contracts

## **CertiK Core Advantages:**

- Comprehensive and Customizable Formal Verification
- Detailed and Transparent Audit Reports
- Code Review by Security Experts
- Audits Performed Across All Major Protocols and Languages
- Auto-generated Counterexamples
- Unlimited Code Re-Audits
- Advanced Penetration Testing by Experienced and Ethical Hackers

## **Quotes:**

- “CertiK mathematically validates the security of smart contracts — which is a critical pain point we are facing in the blockchain ecosystem — bypassing the limitations of manual detection.” - Ella Zhang, CEO of Binance Labs
- “CertiK is one of the most trusted blockchain security technology companies in the world and is on the cutting edge of research and innovation.” - Dan Schatt, Chairman of the Universal Protocol Alliance and President of Cred
